

## **COREDINATE – The Advanced Online Workforce Management System**

In today's world, where security is a top priority, COREDINATE is setting new standards in the workforce management system sector. Founded in August 2014 and based in Uffenheim, Middle Franconia, the company leads the way in meeting customer needs with cutting-edge technology and a comprehensive service offering. COREDINATE, a combination of the company name and product, presents itself as a modern online workforce management system (OWKS®), impressing with its versatility and innovation. Designed as a SaaS (Software as a Service) solution, COREDINATE offers an extensive range of features aimed at revolutionizing the work of security companies and facility management. COREDINATE has been on the market too long to be considered a startup. However, the pathways remain short, the hierarchy is flat, and the code programmed is unique. COREDINATE offers a solution for all business sizes, from small companies to large corporations, both nationally and internationally.

### **Automation and Documentation for the Highest Standards**

COREDINATE enables the logging of work steps, the automation of processes, and the efficient and secure capture of mobile services. This is especially important in public tenders, where clients want to transparently verify whether the commissioned services meet their expectations. Through the intuitive use of the COREDINATE portal, supervisors can effortlessly create and manage duty rosters and patrol rounds. The security personnel, in turn, carry out these rounds using the COREDINATE app, which provides precise instructions for routes and tasks.

### **Technology That Connects**

With practical features such as GPS tracking, lone worker protection systems, and the ability to document anomalies directly via smartphone camera or voice input, COREDINATE sets benchmarks in terms of security and efficiency. The comprehensive services include real-time communication, secure NFC technology, a clear and simple user interface, maintenance-free infrastructure, and 99.99% data availability – all under the umbrella of the highest data security standards with servers located in Germany.

### **Versatility That Convinces**

COREDINATE is more than just a workforce management system; it is a comprehensive assistant tool that enables workplace protection, key management, duty scheduling, and real-time monitoring. The integrated duty schedule function, file manager, and flexible forms offer the opportunity to efficiently organize workflows and adjust them at any time.

### **Transparency That Connects**

A distinctive feature of COREDINATE is the ability to provide clients with portal access, enabling them to gain insights into the security services performed. This transparency enhances satisfaction, strengthens trust, and improves the chances of securing new contracts, particularly in the realm of public tenders. Thus, COREDINATE offers its users a crucial advantage.
